

We have a bank which has some accounts. We want to implement 3 methods for it:

The list of commands:

1.(create account if not exist)

```
DEPOSIT <id> <amount>
```

Output:

```
OK
```

2.

```
WITHDRAW <id> <amount>
```

Output:

```
OK  
Or  
Not enough money  
Or  
Invalid Account
```

3.

```
BALANCE <id>
```

Output:

```
account balance: <amount>
```
