

We have a Class which has some students. We want to implement 2 methods for this class:(each student has a name and a grade)

The list of commands:

1.(Assume we don't add same student_name twice and a student passes a course if he gets more than 10)

```
check_pass <student_name>
```

Output:

```
Yes or No  
Or  
student <student_name> does not exist
```

2.

```
find_mean
```

Output:

```
Mean is <mean>
```
