We have a library which has some books. We want to implement 4 methods to it:(each account has an id and a balance for each id)
The list of commands:

1.(Assume we don't add same book twice)

```
add_book book_name
```

Output:

```
OK
```

2.

```
find _book book_name
```

Output:

```
book <book_name> at index <index>
Or
book <book_name> do not exist
```

3.

```
show_books
```

Output:

```
1.<book_name 1>
2.<book_name 2>
```

…

4.

```
remove_book book_name
```

Output:

```
OK
Or
book <book_name> do not exist
```
